

IN THE ABSTRACT:

The previously submitted abstract has been amended as set forth below. A clean version of the amended abstract is being submitted herewith on a separate sheet.

Amended Abstract

A calendar timepiece has a main plate, a time indicator mounted on the main plate for undergoing rotational movement to indicate time information, a date indicator mounted for undergoing rotation to indicate date information, and a date indicator driving wheel mounted on the main plate for undergoing rotation. ~~A date indicator driving finger is integral with the date indicator driving wheel for rotation therewith and for rotating the date indicator.~~ A date jumper is disposed on the main plate and has a train wheel comprised of a date indicator setting portion for controlling rotation of the date indicator by engagement with the inner teeth portion of the date indicator. The date indicator setting portion has a first setting portion for contacting a tip of a first tooth of the date indicator, a second setting portion, and a third setting portion for contacting a tip of a second tooth of the date indicator. Each of the first, second, and third setting portions has a generally linear surface portion disposed at an angle relative to one another.
